

Student Side UI/UX Checkup

Professional launch review checklist for LMS student experience

Project	LMS Student App
Prepared for	Manual UI/UX QA before live launch
Date	23 May 2026
Reviewer	

How to use	Open each student-side screen on mobile and desktop. Tick Pass if correct, Fix if something needs work, or N/A if the item does not apply.
Priority rule	Fix anything that blocks login, learning, quizzes, payment, accessibility, or mobile use before going live.
Final sign-off	Only mark the launch ready when all critical Fix items are resolved or consciously accepted by the team.

Quick Scoring Summary

Area	Pass Count	Fix Count	Priority Notes
Login & Dashboard			
Courses & Lessons			
Quizzes & Results			
Notes / Planner / Doubts			
Payments & Account			
Mobile & Accessibility			
Performance & Polish			

1. Login, Signup & First Impression

Login screen is clear, professional, and immediately tells the student where to start.	☒	☒	☒	
Password reset flow is easy to find and gives clear feedback after submission.	☒	☒	☒	
Errors are friendly, specific, and shown beside the relevant field.	☒	☒	☒	
No confusing demo/test routes are visible to a normal student.	☒	☒	☒	
First page after login confirms the student is in the right account and area.	☒	☒	☒	

2. Student Dashboard

Dashboard shows the most important next action without forcing the student to hunt.	☒	☒	☒	
Progress cards, course status, and reminders are readable at a glance.	☒	☒	☒	
Empty states explain what to do next when there is no activity yet.	☒	☒	☒	
Primary actions are visually obvious and not competing with too many buttons.	☒	☒	☒	
Dashboard works cleanly on mobile without cramped cards or hidden text.	☒	☒	☒	

3. Navigation & Layout

Bottom/sidebar navigation uses clear labels and predictable icons.	☒	☒	☒	
Current page/active state is always visible.	☒	☒	☒	
Back behavior feels natural from lessons, quizzes, results, and settings.	☒	☒	☒	
No horizontal scrolling appears on mobile screens.	☒	☒	☒	

Fixed headers/bottom bars do not cover important content or buttons.				

4. Courses, Topics & Lessons

Course list helps the student understand what to study next.				
Lesson page has readable spacing, font size, and line length.				
Video/images/files load without layout jumping.				
Completed/in-progress/locked states are visually clear.				
Lesson progress saving gives enough feedback so the student trusts it worked.				

5. Quizzes, Practice & Exam Flow

Quiz start screen explains rules, time, attempts, and question count clearly.				
Question text and answer options are easy to scan on mobile.				
Selected answers have strong visual feedback and are not color-only.				
Timer, submit, next, previous, and review controls are easy to reach.				
Submit confirmation prevents accidental final submission.				

6. Results & Review

Score, pass/fail, percentage, and improvement guidance are easy to understand.				

Correct/wrong answers are clearly separated without relying only on color.				
Explanations are readable and useful for learning, not just marking.				
Review flow helps the student continue learning after a weak result.				
Charts or progress summaries have labels, legends, and accessible colors.				

7. Notes, AI Notes & Bookmarks

Notes are easy to create, edit, save, and find later.				
AI-generated content has clear loading, success, and failure states.				
Bookmark action is obvious and gives confirmation.				
Long notes remain readable on phone screens.				
The student can recover from slow network or failed generation gracefully.				

8. Planner, Notifications & Doubts

Planner tasks can be added/updated without losing existing details.				
Notifications clearly show what is new and where to go next.				
Doubt/question submission has visible labels, helper text, and confirmation.				
Admin replies are easy for students to find again.				
Unread/read states are visible but not noisy.				

9. Subscriptions, Payments & Account Trust

Plan details explain what the student gets before payment.				
Manual payment upload gives file rules, progress, and success/failure feedback.				
Payment pending/approved/rejected states are clear and calm.				
Account/profile/security screens feel trustworthy and complete.				
Sensitive pages do not expose payment proof or private data publicly.				

10. Mobile Responsiveness

Tested on 360px, 390px, 414px, tablet, and desktop widths.				
Touch targets are at least 44px high/wide and not too close together.				
Text remains readable without zooming.				
Keyboard does not hide form buttons on mobile.				
Landscape mode remains usable for quizzes and lesson pages.				

11. Accessibility & Inclusive UX

All meaningful images/icons have accessible labels or text alternatives.				
Keyboard tab order follows the visual order.				
Focus ring is visible on all interactive controls.				
Normal text contrast is at least WCAG AA level.				
Motion-heavy areas respect reduced-motion settings.				

12. Performance, Reliability & Polish

Important pages show loading skeletons or progress for slow requests.				
Images reserve space and do not cause content jumping.				
No broken icons, missing images, console-facing debug labels, or placeholder text.				
Offline/poor network states explain the problem and next step.				
After deployment, latest UI changes appear after refresh/cache clear.				

Final Launch Sign-off

Use this page after all checklist sections are complete. If any critical item is marked Fix, do not launch until it is resolved or accepted by the owner.

Decision	Tick	Notes
Ready for live student testing	☐	
Ready for public launch	☐	
Launch blocked by critical UX issues	☐	
Needs another mobile review	☐
