HOW TO USE THIS REPORT

Each name includes: tagline, brand personality, logo direction, and Sri Lankan student recall hook.
The Top 10 section on page 46 provides final recommendations with scores and rationale.

Medical Authenticity

Every name must carry genuine medical, anatomical, or clinical DNA. A brand like Osmosis or Geeky Medics succeeds because it sounds like it was built by doctors, not marketing departments. Authentic clinical vocabulary signals insider credibility.

Phonetic Simplicity

Names must be easy to say in Sinhala, Tamil, and English. Avoid consonant clusters that cause mispronunciation. Sri Lankan students will share this name verbally — it must travel easily through conversation, WhatsApp groups, and social media.

Visual Branding Potential

Every name must support a logo, colour system, and app icon. Names with strong letterforms (X, V, A, G) and clear visual metaphors have higher design ceiling. The best names have a logo you can picture before the designer touches it.

Scalability Beyond ERPM

The platform should grow beyond ERPM to cover all Sri Lankan medical exams and eventually broader South Asian medical education. The name must not box the product into a single exam. Amboss scaled globally. Osmosis became a brand. Aim for that.

Anti-Generic Strictness

No "Med-" prefix that sounds like a pharmacy. No "-Path", "-Prep", "-Master" suffix that sounds like tutoring. No compound words that could be any study app in any country. The brand must feel like it belongs to medicine, not to generic ed-tech.
